---

<b>Status</b>	RECRUITING
<b>Sponsor</b>	Menzies Research Institute, University of Tasmania
<b>Enrollment</b>	300 participants

## Plain Language Summary

---

This study is helping children aged 7 to 13 with reading difficulties (dyslexia) by testing three different reading support programs to find out which works best. Researchers are particularly interested in whether problems with eye coordination (how both eyes work together to read) play a role in reading difficulties, and whether certain programs can help overcome them.

You may be eligible if:

- Your child is between 7 and 13 years old
- They scored in the lowest 10% on Grade 3 national literacy tests
- They also showed poor stereo vision (eye coordination) on a screening test
- Your family lives in Southern Tasmania (with a telephone area code of 0362)

You may NOT be eligible if:

- Your child has a major intellectual impairment
- Your child has epilepsy

Talk to your doctor about whether this trial might be right for you.

## Key Eligibility Criteria

---

### Inclusion (1)

- Children in the lowest decile of literacy according to Grade 3 national literacy and numeracy tests who also have poor stereovision on screening assessment. Children must reside in Southern Tasmania (telephone 0362).

### Exclusion (1)

- Major intellectual impairment or epilepsy.

## Locations (1 total)
