

Bevacizumab intravitreal injection in the treatment of patients with Central Retinal Vein Occlusion.

ACTRN12611000300976

Status	RECRUITING
Phase	Phase 2
Sponsor	Royal Adelaide Hospital
Enrollment	22 participants

Plain Language Summary

This study is testing whether an injection of a drug called Bevacizumab into the eye can help treat a condition called central retinal vein occlusion (CRVO). CRVO happens when a major vein in the retina (the back of the eye) becomes blocked, causing swelling and vision loss. Bevacizumab works by blocking a protein that causes abnormal blood vessel growth and swelling. This trial compares the injection treatment to a placebo (sham) treatment to see if it improves vision.

You may be eligible if:

- You are 18 years or older
- You have swelling in the centre of the retina (macula) caused by central retinal vein occlusion
- Your vision in the affected eye is between 20/40 and 20/320 (moderate to severe vision loss)

You may NOT be eligible if:

- You have diabetic macular oedema
- You are pregnant or breastfeeding
- You have uncontrolled high blood pressure or unstable heart disease
- You have had certain recent eye surgeries or active eye infections
- You have uncontrolled glaucoma

Talk to your doctor about whether this trial might be right for you.

Key Eligibility Criteria

Inclusion (4)

- Age > 18 years,
- Males and females,
- Patients presenting with macular oedema secondary to CRVO.
- BCVA of 20/40 to 20/320 in the study eye

Exclusion (16)

- Subjects that have used other investigational drug for last 30 days or 5 half-lives (whichever is longer)
- Adequate renal function (glomerular filtration calculated by Cockcroft/Gault formula or measure urine creatinine clearance greater than or equal to 50 mL/minute)
- Diabetic retinopathy with clinically significant macular oedema.
- Retreatment in therapy associated with severe vision loss; unstable heart disease, uncontrolled hypertension; pregnancy, lactation, children
- History of submacular surgery or other surgical intervention for AMD in the study eye, glaucoma filtration surgery, corneal transplant surgery,

... and 11 more (see full listing online)
