Status	RECRUITING
Sponsor	ZIP Diagnostics Pty Ltd
Enrollment	70 participants

Plain Language Summary

New diagnostic tests for infectious diseases — like rapid COVID-19 tests — need to be carefully validated before they can be trusted in a clinic. One important part of this process is testing them with samples from healthy people who definitely don't have the infection, to make sure the test doesn't produce false positives.

This study collects biological samples (such as nasal swabs, blood, or saliva) from healthy volunteers with no signs of infection. These 'negative' samples are then used in the laboratory to help develop and validate rapid point-of-care tests for diseases including respiratory infections, sexually transmitted infections, hepatitis, dengue, and more.

You may be eligible if you are 18 years or older, feel healthy, and are willing to provide samples. There are no exclusion criteria — this study is open to all healthy adults who can give informed consent. Participation is a meaningful way to contribute to better, faster diagnostics for communities around the world.

Key Eligibility Criteria

Inclusion (2)

- Written informed consent is provided.
- Age: 18 years years and older

Exclusion (1)

- None

Locations (1 total)

Royal Melbourne Hospital - City campus - Parkville, VIC, Australia
