

# Natural History of Thyroid Function Disorders

NCT00001159

---

<b>Status</b>	RECRUITING
<b>Sponsor</b>	National Institute of Diabetes and Digestive and Kidney Diseases (NIDDK)
<b>Enrollment</b>	2,500 participants

## Key Eligibility Criteria

---

### Inclusion (7)

- The categories of subjects eligible to participate in this study include:
  - Patients with known or suspected thyroid abnormalities (e.g. hypothyroidism, hyperthyroidism, extreme iodine deficiency, and inherited forms of hypothyroidism resulting from abnormalities in the expression of genes coding for the TSH- beta subunit, Pax-8, TTF-2, Pit-I, Tg, PDS, and NIS.
  - Patients with thyroid function test (TFT) abnormalities due to:
    - Non-thyroidal illness
    - Abnormalities of serum TH binding proteins leading to euthyroid hyperthyroxinemia or hypotriiodothyronemia.
- ... and 2 more (see full listing online)

### Exclusion (19)

- Patients with known or suspected thyroid abnormalities will be eligible to participate if the individual meets all of the following criteria:
    - Stated willingness to comply with all study procedures and availability for the duration of the study.
    - Male or female, aged 6 months+.
    - Hyperthyroid states include but are not restricted to:
      - Graves' disease (GD) thought to result from thyroid-stimulating immunoglobulins (TSIg's), a subclass of which also stimulate eye muscle and fatty tissue producing exophthalmos (Graves' ophthalmopathy), as well as the skin in the pretibial area causing pretibial myxedema (Graves' dermopathy);
- ... and 14 more (see full listing online)
