

# MRI Study of Musculoskeletal Function

NCT00051857

---

<b>Status</b>	RECRUITING
<b>Sponsor</b>	National Institutes of Health Clinical Center (CC)
<b>Enrollment</b>	750 participants

## Key Eligibility Criteria

---

### Inclusion (11)

- Affected Participants:
- Must be between the ages of 5-95 years.
- Minors < 18 years of age, they must be capable of providing assent (verbal or written) with parental or legal guardian permissions obtained.
- Adults 18 >= years of age, they must be able to provide informed consent.
- Have the presence of a bone, muscle, soft tissue, connective tissue injury, impairment or related muscular skeletal system pathology.

... and 6 more (see full listing online)

### Exclusion (8)

- Affected Participants:
- For the MR imaging portion of this study, all participants must complete the NIH Diagnostic Radiology screening questionnaire. If any potential contraindication is found, either the volunteer's doctor (with knowledge of the potential contraindication) or the radiology department at the NIH will be contacted to determine if the potential contraindication would exclude them from the specific MR scans being proposed.
- Healthy Volunteer Participants
- Any relevant medical problems
- Clinical signs of an impairment in the joint/limb being studied.

... and 3 more (see full listing online)
