

Oral Specimen and Data Acquisition Study of Subjects Requiring Third Molar Removal

NCT01805869

Status	RECRUITING
Sponsor	National Institute of Dental and Craniofacial Research (NIDCR)
Enrollment	10,000 participants

Key Eligibility Criteria

Inclusion (5)

- Ages greater than or equal to 16-50 years
- Clinical evidence of need for third molar extraction as determined by medical, dental, and radiographic evaluation by a NIDCR oral surgeon
- Willing to allow for the collection of extracted waste tissue (e.g., teeth, alveolar bone, excessive gingival tissue) to be used for research
- In good general health as defined by the American Society of Anesthesiologists (ASA) status I or II
- Able to understand and sign an informed consent

Exclusion (2)

- Pregnant or nursing women
- Unable to have third molar extraction as determined by NIDCR surgeon/dentist, due to medical conditions (beyond ASA I or II), complexity of the surgery, or history that precludes safe outpatient conscious sedation. These clinical decisions will be based on the risks and benefits related to the surgery.
