

OCT in Rare Chorioretinal Diseases

NCT02141308

Status	RECRUITING
Sponsor	Oregon Health and Science University
Enrollment	150 participants

Plain Language Summary

This study is using a special type of eye scan called Optical Coherence Tomography (OCT) to monitor and document rare diseases affecting the retina and choroid (the layers at the back of the eye) over time, helping researchers better understand how these rare conditions progress.

****You may be eligible if...****

- You have been diagnosed with a rare disease affecting the retina or choroid (back of the eye)
- You are able to consent and complete study tests within a 30-day period

****You may NOT be eligible if...****

- You cannot give informed consent
- You have a serious kidney disease requiring dialysis or transplant
- Your blood pressure is very high (above 180/110) and not controlled with medication
- You are pregnant, breastfeeding, or planning to become pregnant within the next year
- You have a cataract or other eye condition that would affect the quality of scans

Talk to your doctor to see if this trial is right for you.

Key Eligibility Criteria

Inclusion (17)

- Subject-Level Criteria:
- Inclusion a. Diagnosis of retinal or choroidal disease
- Exclusion
- Inability to give informed consent.
- Inability to complete study tests within a 30 day period
- ... and 12 more (see full listing online)

Locations (1 total)

Casey Eye Institute, Oregon Health & Science University, Portland, Oregon, United States
