

# A Molecular Anatomic Imaging Analysis of Tau in Progressive Supranuclear Palsy

NCT02605785

---

Status	RECRUITING
Phase	Not Applicable
Sponsor	Mayo Clinic
Enrollment	332 participants

## Key Eligibility Criteria

---

### Inclusion (8)

- Must be over 35 years of age and present with gradual progression of PSP-related symptoms
- Must have an informant or study partner that can provide independent information of functioning.
- Must meet criteria for possible or probable Progressive Supranuclear Palsy. To fulfill criteria for possible PSP, subjects must have a gradually progressive disorder with either vertical (upward or downward) supranuclear palsy or both slowing of vertical saccades and prominent postural instability with falls in the first year of disease onset. To fulfill criteria for probable PSP, subjects must have vertical (upward or downward gaze) supranuclear palsy and prominent postural instability with falls in the first year of disease onset.
- Subjects with concurrent illnesses that could account for their symptoms, such as traumatic brain injury, encephalitis, strokes or developmental syndromes will be excluded.
- Women that are pregnant or post-partum and breast-feeding will be excluded.

... and 3 more (see full listing online)
