

# Accuracy of the Sensory Test Using the Laryngopharyngeal Endoscopic Esthesiometer in Obstructive Sleep Apnea

NCT03109171

---

Status	RECRUITING
Phase	Not Applicable
Sponsor	Fundación Neumologica Colombiana
Enrollment	117 participants

## Key Eligibility Criteria

---

### Inclusion (1)

- Patients being 18 years old or more referred to the sleep laboratory of a tertiary care university hospital for a baseline polysomnography for suspected OSA.

### Exclusion (17)

- Bleeding diathesis.
- Basal awake oxygen saturation by pulse oximetry below 88%.
- Not agree to participate in the study.
- Glasgow coma scale below of 15 (to avoid confusion with involvement of laryngopharyngeal reflexes due to neurological disease accompanied by decreased level of consciousness).
- Baseline polysomnography that does not meet validity criteria to be interpreted (according to the American Academy of Sleep Medicine).

... and 12 more (see full listing online)
