

Outcomes and Data Collection for Fecal Microbiota Transplantation for the Treatment of Recurrent Clostridium Difficile

NCT03562741

Status	RECRUITING
Phase	Not Applicable
Sponsor	Krunal Patel
Enrollment	500 participants

Key Eligibility Criteria

Inclusion (3)

- Two or more recurrences of C. difficile infection (CDI) with recurrence defined as a positive test result, e.g. Polymerase Chain Reaction (PCR) test and with appropriate symptoms within 2-8 weeks of last positive result, provided that symptoms from earlier episode resolved with or without therapy.
- Failed standard therapy with oral metronidazole and/or oral vancomycin
- One or more episodes of severe CDI resulting in hospitalization and not responding to standard antibiotic therapy. Hospitalization for CDI occurs in the setting of severe diarrhea, abdominal pain and signs of systemic toxicity

Exclusion (2)

- Age <16 years old
- patients with acute severe colonic dilation at risk for colonic perforation

Locations (1 total)

UMass Memorial Medical Center, Worcester, Massachusetts, United States
