

# Using QPOP to Predict Treatment for Sarcomas and Melanomas

NCT04986748

---

<b>Status</b>	RECRUITING
<b>Sponsor</b>	National Cancer Centre, Singapore
<b>Enrollment</b>	100 participants

## Plain Language Summary

---

This study is using a lab platform called QPOP to test cancer tissue from patients with sarcomas (bone and soft tissue cancers) or melanomas — exposing the cells to multiple drug combinations to predict which treatment is most likely to work for that individual patient.

**\*\*You may be eligible if...\*\***

- You have been diagnosed with sarcoma or melanoma
- You have at least one tumor that can be safely biopsied or surgically removed
- You are able to provide informed consent

**\*\*You may NOT be eligible if...\*\***

- There are no specific exclusion criteria beyond meeting the inclusion criteria listed above

Talk to your doctor to see if this trial is right for you.

## Key Eligibility Criteria

---

### Inclusion (4)

- Diagnosis of sarcoma or melanoma
- At least 1 tumour lesion amenable to fresh biopsy or resection
- Signed informed consent from patient or legal representative
- Able to comply with study-related procedures

## Locations (1 total)

---

National Cancer Centre Singapore, Singapore, Singapore
