

# Feasibility and Initial Clinical Impressions of Predictive Monitoring Integrated With the RACE Team

NCT05108376

---

|            |                                    |
|------------|------------------------------------|
| Status     | RECRUITING                         |
| Phase      | Not Applicable                     |
| Sponsor    | Ottawa Hospital Research Institute |
| Enrollment | 140 participants                   |

## Key Eligibility Criteria

---

### Inclusion (5)

- Adult patient (greater than or equal to 18 years of age) designated for the most aggressive levels of potential intervention (Category 1 status - Full Care and Category 2 status - Full Care except CPR) who belong to one of the following groups:
- Patients who have undergone high risk elective surgery (Whipple procedures, high risk vascular surgery, high risk general surgery, among others)
- Malignant haematology or oncology patients at high risk for deterioration
- Patients with infection admitted from the Emergency Department (ED) to the ward
- Other high-risk patients determined at the discretion of the clinical team

### Exclusion (2)

- Patients admitted to a unit with higher level monitoring (Neurological Acute Assessment Unit, Acute Monitoring Area, Trauma Step-Down, Intensive Care Unit)
- Patients with Category III (Full Care except Respiratory or Hemodynamic Life Support, or CPR) or IV status (Comfort Care)

## Locations (1 total)
