

# Veri-T: A Trial of Verdiperstat in Patients With svPPA Due to TDP-43 Pathology

NCT05184569

---

<b>Status</b>	RECRUITING
<b>Phase</b>	Phase 1
<b>Sponsor</b>	Peter Ljubenkov, MD
<b>Enrollment</b>	64 participants

## Key Eligibility Criteria

---

### Inclusion (7)

- Between 18 and 85 years of age (inclusive) at the initial screening visit;
- Meets 2011 consensus criteria for svPPA (Gorno-Tempini et al. 2011);
- MRI at screening is consistent with the underlying svPPA with no large strokes or severe white matter disease (Fazekas Grade d2; Fazekas et al. 1987);
- CDR® plus NACC FTLD (Miyagawa et al. 2020) global score at screening d1;
- The following medications are allowed, but must be stable for 2 months prior to the initial screening visit:  
... and 2 more (see full listing online)

### Exclusion (42)

- Has a reliable study partner who agrees to accompany the participant to visits, and spends at least 5 hours per week with the participant;
- Agrees to 2 LPs;
- Signed and dated written informed consent obtained from the participant and the participant's study partner in accordance with local Institutional Review Board (IRB) regulations;
- WOCBP must agree to abstain from sex or use highly effective birth control that includes two methods of contraception (one of which must be a barrier method) for the duration of the screening period, the RDBPC treatment period, and for 30 days after the last dose of study drug (active or placebo);
- Males must agree to abstain from sex with WOCBP or use an adequate method of contraception for the duration of the RDBPC treatment period and for 90 days after the last dose of study drug (active or placebo);  
... and 37 more (see full listing online)

## Locations (5 total)

---

UCSF Memory and Aging Center, San Francisco, California, United States
