

Efficacy and Safety of Aspirin in Patients With Chronic Coronary Syndromes Without Revascularization

NCT05347069

| | |
|------------|--------------------|
| Status | RECRUITING |
| Phase | Phase 4 |
| Sponsor | Takeshi Morimoto |
| Enrollment | 2,890 participants |

Key Eligibility Criteria

Inclusion (2)

- Patients with chronic coronary syndromes with $\geq 50\%$ diameter stenosis in one or more major coronary vessels/major branches on coronary CT or coronary angiography but not eligible for coronary revascularization
- Patients for whom consent can be obtained

Exclusion (12)

- Patients with history of acute coronary syndromes (ACS)
- Patients with history of percutaneous coronary intervention (PCI) or coronary artery bypass graft (CABG)
- Patients with left main trunk stenosis ($\geq 50\%$)
- Patients for whom aspirin administration is mandatory
- Patients undergoing antithrombotic therapy other than aspirin
