

# Linear Stapler Versus Circular Stapler in Esophagojejunostomy

NCT05360069

---

Status	RECRUITING
Phase	Not Applicable
Sponsor	Nanchong Central Hospital
Enrollment	100 participants

## Plain Language Summary

---

This study is comparing two surgical techniques — a linear stapler versus a circular stapler — used to reconnect the food pipe (esophagus) to the small intestine after total stomach removal surgery for stomach cancer.

**\*\*You may be eligible if...\*\***

- You have been confirmed by biopsy to have stomach (gastric) adenocarcinoma at stages T1 through T4
- Your general health score (ECOG performance status) is 0 or 1
- Your organ function is adequate for surgery

**\*\*You may NOT be eligible if...\*\***

- Your cancer has spread to distant organs (metastatic disease)
- The cancer has spread more than 3 cm into the esophagus
- You have a very large or diffuse type of stomach cancer (Borrmann type 4 or large type 3)
- You have previously received chemotherapy or radiation for another cancer

Talk to your doctor to see if this trial is right for you.

## Key Eligibility Criteria

---

### Inclusion (3)

- Histologically confirmed adenocarcinoma of the stomach, T1-T4 stages.
- Eastern Cooperative Oncology Group performance status of 0 or 1.
- Adequate organ function.

### Exclusion (4)

- Patients had distant metastasis.
- oesophageal invasion of more than 3 cm.
- Borrmann type 4 or large (more than 8 cm) type 3 carcinoma.
- Previous chemotherapy or radiation therapy for any other malignancies.
