

Study to Evaluate ARINA-1 in the Prevention of Bronchiolitis Obliterans Progression in Participants With Bilateral Lung Transplant

NCT05654922

Status	RECRUITING
Phase	Phase 3
Sponsor	Renovion, Inc.
Enrollment	100 participants

Key Eligibility Criteria

Inclusion (9)

- Bilateral lung transplant ≥ 12 months from the time of Visit 1 / Randomization
- Age 18-75 years old at the time of consent
- Routinely followed at enrolling site
- Willing and able to comply with visit schedule and at-home requirements
- % decrease in FEV1 from the post-transplant baseline within the last 12 months.

... and 4 more (see full listing online)

Exclusion (22)

- Positive urine pregnancy test at screening and baseline visit
- Diagnosis of active congestive heart failure or symptomatic coronary artery disease \geq grade 3 based on the New York Heart Association Functional Classification (NYHA) criteria
- Restrictive allograft syndrome (RAS) defined by radiographic interstitial or alveolar opacities on chest X-ray or CT scan that are consistent with RAS
- Have advanced BOS, defined by $\geq 24\%$ decrease in FEV1 in post-transplant baseline
- A diagnosis of probable antibody-mediated rejection (AMR) < 12 months prior to the baseline visit

... and 17 more (see full listing online)
