

Evaluating the Utility of RELiZORB™ for Treating Feeding Intolerance in Critically Ill Adults With Multi-Organ Failure

NCT05710315

Status	RECRUITING
Phase	Not Applicable
Sponsor	Inova Health Care Services
Enrollment	32 participants

Key Eligibility Criteria

Inclusion (4)

- Male or female patients aged 18 - 89 years of age.
- Patients who have Multi-Organ Failure (MOF) (defined as requiring mechanical ventilation and demonstrating at least one more system failure on the SOFA score on the day of ICU admission).
- Patients who have not yet been initiated on enteral nutrition, yet enteral nutritional support is needed, or patients who have been initiated on enteral nutrition within the previous 48 hours. Enteral nutrition support defined as support planned to be given via any route connected to the gastrointestinal system (i.e., the enteral route). This includes tube feeding using nasogastric, nasoduodenal, gastrostomy, jejunostomy tubes, or similar.
- Patients who lack the capacity to consent for themselves may be included upon receiving consent from their legally authorized representatives.

Exclusion (7)

- Pregnant women and prisoners.
- Hypotension is attributed to suspected or confirmed cardiogenic shock.
- Evidence of unresolved intestinal obstruction, ischemia, bleeding, perforation, fistulas or tract discontinuity, or other contraindication for enteral nutrition.
- Sepsis suspected or confirmed due to an abdominal source and enteral nutrition is contraindicated.
- C. Difficile or other gastrointestinal infection that may manifest with diarrhea.
- ... and 2 more (see full listing online)
