

Cardiovascular and Venous Thromboembolism Disease in Patients with Von Willebrand Disease in the French West

NCT05773638

Status	RECRUITING
Sponsor	University Hospital, Brest
Enrollment	100 participants

Plain Language Summary

This study is looking at cardiovascular and blood clot-related events (such as deep vein thrombosis, stroke, or heart attack) in adults with Von Willebrand disease (VWD) — a genetic bleeding disorder — who have experienced these events. Researchers want to understand how often these complications occur and what factors contribute to them in this unique patient population.

You may be eligible if...

- You are an adult with Von Willebrand disease
- You are followed at a reference center in western France
- You have experienced a cardiovascular or blood clot event (such as a stroke, heart attack, deep vein thrombosis, or pulmonary embolism)
- You have consented (or not objected) to being included in the BERHLINGO database

You may NOT be eligible if...

- You have objected to inclusion in the database
- Your VWD is acquired (not genetic)

Talk to your doctor to see if this trial is right for you.

Key Eligibility Criteria

Inclusion (6)

- Von Willebrand disease
- Adult
- Followed-up in a reference center of West of France (Caen, Brest, Nantes, Rennes, Le Mans, Angers)
- Consented to be included in BERHLINGO database
- Have presented a thrombotic and/or embolic event or cardiovascular disease including deep vein thrombosis, pulmonary embolism, ischemic stroke, transient ischemic attack, acute coronary syndrome, acute limb ischemia or angina or obliterating arteriopathy of the lower limbs, atrial fibrillation.

... and 1 more (see full listing online)

Exclusion (4)

- \- Expression of opposition
- Acquired von Willebrand syndrome
- Patients under legal protection
- Minor

Locations (6 total)
