

Functional Dyspepsia Treatment Using Virtual Reality

NCT05836597

Status	RECRUITING
Phase	Not Applicable
Sponsor	Mayo Clinic
Enrollment	30 participants

Key Eligibility Criteria

Inclusion (3)

- Symptoms of dyspepsia thought to represent functional dyspepsia, meeting Rome IV criteria
- Had an upper endoscopy and assessment for *Helicobacter pylori*; if a patient is found to have *H. pylori*, treatment with confirmed eradication (by stool antigen test or urea breath test) will be required before the patient is eligible for study inclusion.
- Patients will be considered for the study if they have undergone a complete history and physical examination during a previously scheduled consultation/evaluation visit with a gastroenterologist in the Mayo Clinic Florida General GI or Motility clinic.

Exclusion (6)

- Symptoms are thought to represent an organic disorder (e.g., peptic ulcer disease, hepatitis, pancreatitis, inflammatory bowel disease, type I diabetes, a known malignancy, radiation-induced injury, an active infection, vasculitis, celiac disease), or patients have known uncontrolled GERD, esophagitis, eosinophilic esophagitis, or untreated *H. pylori*.
 - Patients with gastroparesis or cyclic vomiting syndrome.
 - Patients with prior surgery to the esophagus, stomach or duodenum.
 - Patients taking opioids.
 - Patients with motion sickness, vertigo, or a seizure disorder
- ... and 1 more (see full listing online)
