

Impact of Early Antibiotics on Non-Traumatic Out of Hospital Cardiac Arrest (OHCA)

NCT05914779

Status	RECRUITING
Phase	Not Applicable
Sponsor	Hamad Medical Corporation
Enrollment	1,000 participants

Key Eligibility Criteria

Inclusion (3)

- Adults aged ≥ 18 years, presenting to HGH ED after out-of-hospital cardiac arrest
- Patients with low likelihood of infection as per the definitions provided above
- Ability to obtain informed consent from the subjects or their next of kin/family member/legal surrogate in case of incapacitation due to sedation, mechanical ventilation, etc. In case the next of kin is not available, an independent physician who is not a part of the investigative team will complete and sign the checklist as per HMC Policy "RES 11026_Appendix 6.5". (see section 4.1.3 for details) A member of the investigative team and a witness will also sign this form before the potential subject is enrolled in the study.

Exclusion (9)

- Patients who have clear evidence of infection, as defined by criteria for the study.
 - Patients who have received antibiotics within the last 1 week prior to admission.
 - Patients with malignancy, except those who have been cured or in complete remission.
 - Females with known pregnancy.
 - Known immunocompromised states (including HIV/AIDS, transplant recipients on immunosuppressant drugs, long-term ≥ 3 weeks of prednisone ≥ 5 mg/day equivalent) steroid therapy).
- ... and 4 more (see full listing online)
