

Effect of Photobiomodulation to Reduce Post-operative Pain After Endodontic Surgery

NCT05935306

Status	RECRUITING
Phase	Not Applicable
Sponsor	University of Nove de Julho
Enrollment	34 participants

Key Eligibility Criteria

Inclusion (5)

- Patients with periapical lesions who have already undergone endodontic treatment (lesions smaller than 10mm in their greatest diameter - Metin et al., 2018, single and chronic lesions)
- Patients with not comorbidities,
- Age from 18 to 70 years,
- Both genders,
- Healthy permanent teeth with good hygiene.

Exclusion (5)

- Who are taking drugs that affect bone metabolism and the inflammatory process (for example: corticosteroids, bisphosphonates),
- Smokers, pregnant or lactating women,
- Who used anti-inflammatory drugs in the last 3 months before surgery.
- Who for any reason interrupted the evolution of the treatment for not attending joint appointments.
- Patients who do not follow the guidelines or have an injury in the acute phase (pain, edema, exudate)
