

Evaluation of the Prognostic Value of PET/MRI in Cardiac Sarcoidosis

NCT05954507

Status	RECRUITING
Phase	Not Applicable
Sponsor	Assistance Publique - Hôpitaux de Paris
Enrollment	180 participants

Key Eligibility Criteria

Inclusion (8)

- Age e 18 years
 - Sarcoidosis defined according to ATS/ERS/WASOG criteria
 - Suspicion of cardiac involvement in sarcoidosis:
 - Clinical manifestations (syncope, lipothymia, persistent palpitations, signs of heart failure) and/or
 - Cardiac rhythm or conduction disorder (Mobitz type 2 atrioventricular block (AVB), AVB 3, right or left bundle branch block, Q wave in at least 2 leads, ventricular arrhythmia (ventricular mono/polymorphic complexes > 1000 per 24 h, ventricular tachycardia, ventricular fibrillation), unexplained sustained VT or epsilon wave) and/or
- ... and 3 more (see full listing online)

Exclusion (16)

- Psychiatric illness not controlled by treatment
 - Claustrophobia
 - Known pregnancy or breast-feeding patient
 - Unbalanced diabetes (influence on carbohydrate metabolism for PET)
 - Previous infarction or known coronary disease
- ... and 11 more (see full listing online)

Locations (1 total)

Henri Mondor Hospital, Créteil, France
