

Pilot Feasibility Study of Fecal Microbiota Transplant for the Treatment of Small Intestinal Bacterial Overgrowth

NCT05967871

Status	RECRUITING
Phase	Phase 1
Sponsor	McMaster Children's Hospital
Enrollment	20 participants

Key Eligibility Criteria

Inclusion (3)

- Patients 3-18 years old
- Patients will discontinue antibiotics for at least 1 week prior to FMT
- A diagnosis of SIBO established through lactose breath test (LBT), and showing of symptoms of SIBO

Exclusion (3)

- Participants will not be permitted to start any new treatments (including antibiotics, probiotics, antacid treatments, or antimotility treatments) until Week 8, unless clinically indicated
- We will exclude participants <3yo to avoid potential concerns of microbial transmission in young children, and to ensure participants are developmentally able to perform LBT
- All potential participants should request a referral through their primary, or subspecialty physician. We would be pleased to help facilitate this contact if needed, provided the appropriate contact information can be sent.
