

# SupraScapular Cuff Study: Assessing the Effects of Size and Type of Rotator Cuff Tear on Suprascapular Nerve Function

NCT06002009

---

|            |  |
|------------|--|
| Status     | RECRUITING                                       |
| Sponsor    | University Hospitals of North Midlands NHS Trust |
| Enrollment | 250 participants                                 |

## Key Eligibility Criteria

---

### Inclusion (1)

- All patients age ≥18 years presenting to a UHNM shoulder clinic with a confirmed diagnosis of a rotator cuff tear (affecting one or both shoulders).

### Exclusion (11)

- Bony pathology (such as significant shoulder arthritis that would exclude isolated rotator cuff repair)
- Grossly abnormal shoulder anatomy
- Motor Neurone Disease
- Cervical cord disease affecting the SSN nerve roots
- Patients unable to undergo MRI scan
- ... and 6 more (see full listing online)

## Locations (1 total)
