

Predictive Value of Glycemic Parameters Measured With the FSL Pro iQ During ACS

NCT06014112

Status	RECRUITING
Phase	Not Applicable
Sponsor	University Hospital, Montpellier
Enrollment	850 participants

Key Eligibility Criteria

Inclusion (1)

- Patients with ACS managed in a cardiac intensive care unit (ICU). The diagnosis of ACS will be made in the presence of chest pain with ST-segment elevation on the ECG for STEMI or ST-segment change and/or a positive troponin cycle (values in accordance with the center's protocol) for NSTEMI.

Exclusion (10)

- Subjects in cardiogenic or septic shock
- Subjects with ACS initially managed in a non-investigating center
- Failure to obtain free, informed, written consent signed by the participant and investigator upon admission to the ICU
- Person participating in another research study with an ongoing exclusion period
- Subjects participating in a study that may have an impact on post ACS prognosis
