

Vitamin C to Quality of Life in Patients With Terminal Stage Pancreatic Cancer

NCT06018896

Status	RECRUITING
Phase	Phase 2
Sponsor	Fudan University
Enrollment	20 participants

Plain Language Summary

This study tests whether high-dose intravenous vitamin C can improve quality of life for patients with terminal metastatic pancreatic cancer whose cancer has progressed after two rounds of chemotherapy.

****You may be eligible if...****

- You are between 18 and 80 years old
- You have confirmed metastatic pancreatic adenocarcinoma
- Your cancer has progressed after two lines of chemotherapy
- You have adequate organ function and at least one measurable tumor
- Your expected survival is at least 1 month

****You may NOT be eligible if...****

- You have another active cancer
- Your cancer type is not adenocarcinoma
- You are pregnant or breastfeeding
- You have G6PD deficiency (a genetic enzyme condition that makes high-dose vitamin C dangerous)
- You have kidney failure or require dialysis
- You have serious gut inflammation (pancreatitis, cholecystitis, etc.)

Talk to your doctor to see if this trial is right for you.

Key Eligibility Criteria

Inclusion (9)

- Ability to understand and the willingness to sign a written informed consent document.
- Age e 18 years and d 80 years.
- Eastern Cooperative Oncology Group (ECOG) performance status 0-2.
- Histologically or cytologically confirmed metastatic pancreas adenocarcinoma.
- Tumor progression after two lines of chemotherapy.
- ... and 4 more (see full listing online)

Exclusion (9)

- Active second primary malignancy or history of second primary malignancy.
- The diagnosis was confirmed by pathology as non-adenocarcinoma of pancreas.
- Inflammation of the digestive tract, including pancreatitis, cholecystitis, cholangitis, etc.
- Pregnant or nursing women.
- Glucose-6-phosphate dehydrogenase (G6PD) deficiency.

... and 4 more (see full listing online)
