

# Placement of Biliary Drainage Stent to Prevent Biliary Intestinal Anastomosis After Liver Transplantation in Children

NCT06048445

---

**Status** RECRUITING  
**Sponsor** Zhejiang University  
**Enrollment** 108 participants

## Plain Language Summary

---

This study looks at whether placing a small drainage tube (stent) in the bile duct during liver transplant surgery can prevent complications with the connection between the bile duct and the intestine in young children.

**\*\*You may be eligible if...\*\***

- Your child had a liver transplant at the First Affiliated Hospital of Zhejiang University School of Medicine
- Your child is 6 years old or younger
- This is your child's first liver transplant
- You are willing to sign a consent form

**\*\*You may NOT be eligible if...\*\***

- Your child has a mental illness that affects their ability to cooperate or follow instructions

Talk to your doctor to see if this trial is right for you.

## Key Eligibility Criteria

---

### Inclusion (4)

- The patient underwent liver transplantation surgery at the First Affiliated Hospital of Zhejiang University School of Medicine;
- Age d 6 years old;
- First liver transplantation;
- Willing to sign an informed consent form.

### Exclusion (1)

- \- Existence of mental illnesses that can affect cognition and coordination.

## Locations (1 total)

---

the First Affiliated Hospital, Zhejiang University School of Medicine, Hangzhou, Zhejiang, China
