

# Pai.ACT - An Artificial Intelligence Driven Chatbot Assisted ACT

NCT06086951

---

<b>Status</b>	RECRUITING
<b>Phase</b>	Not Applicable
<b>Sponsor</b>	Chinese University of Hong Kong
<b>Enrollment</b>	60 participants

## Key Eligibility Criteria

---

### Inclusion (4)

- Primary caregivers who are Cantonese-speaking Hong Kong residents.
- The caregiver must cohabitate with the child with special needs.
- The child under the participant's care should be aged between 2-8 years. The child should be either diagnosed or suspected to have one of the developmental conditions such as ASD, ADHD, or DD. These conditions must be recognised by the Child Assessment Service of the Department of Health and conform to the DSM-5 criteria. The diagnosis or suspected diagnosis should be documented in the electronic medical record at the study hospital or the case profile record at the collaborating non-governmental organisations.
- Note: The age range of 2-8 years was selected due to the substantial impact of parenting on the developmental milestones of preschoolers and junior school-aged children.

### Exclusion (6)

- Parents diagnosed with severe mental illnesses are excluded.
- Parents who are currently pregnant are excluded.
- Parents who are less than six months postpartum are excluded.
- Parents with a developmental disability that interferes with their ability to comprehend the program's content are excluded.
- Parents with cognitive, language, communication, visual, or hearing impairments or disorders that could impede their understanding of the intervention content are excluded.
