

Amoxicillin Alone Versus Amoxicillin/Clavulanate for Community-acquired Pneumonia in Patients Aged 65 Years or Older, and Hospitalized in a Non-intensive Care Unit Ward

NCT06229288

Status	RECRUITING
Phase	Phase 3
Sponsor	Nantes University Hospital
Enrollment	326 participants

Key Eligibility Criteria

Inclusion (5)

- Patient aged 65 years or older with or without comorbidities defined by chronic diseases in immunocompetent patients,
- Patient admitted to the hospital for a CAP defined by at least two clinical signs of pneumonia (cough, sputum production, dyspnea, tachypnea, or pleuritic pain, abnormal lung auscultatory sounds, fever (temperature $> 38^{\circ}\text{C}$) or hypothermia ($< 36^{\circ}\text{C}$)), and had radiological evidence of a new infiltrate confirming pneumonia
- Patient understanding oral and written French
- Written informed consent obtained from patient prior to participation in the study (if the patient is unable to express in writing: consent by a trusted person).
- Patients should be able to call and to answer to a phone call or to be with a relative who can help him to call or to answer questions notably raised by a medical staff belonging to the investigational site

Exclusion (20)

- Signs of severe CAP (abscess, massive pleural effusion, serious chronic respiratory insufficiency, ICU admission)
- Patient requiring ICU admission,
- Estimated Glomerular Filtration Rate < 30 ml/min,
- Known immunosuppression (asplenia, neutropenia, agammaglobulinemia, transplant, myeloma, lymphoma, known HIV and $\text{CD4} < 200/\text{mm}^3$),
- Exacerbation of chronic obstructive pulmonary disease,
- ... and 15 more (see full listing online)
