

Clinical Trial of the Safety and Efficacy of Peripheral Nerve Stimulation in the Treatment of Peripheral Neuropathic Pain.

NCT06290661

Status	RECRUITING
Phase	Not Applicable
Sponsor	Union Hospital, Tongji Medical College, Huazhong University of Science and Technology
Enrollment	60 participants

Key Eligibility Criteria

Inclusion (6)

- years old and above, male or female
- Diagnosed by trained clinical doctors as postherpetic neuralgia, which is an indication for peripheral nerve stimulation therapy;
- Assess the damage or disease of the peripheral sensory system through the four questions of Douleur Neuropathy before surgery;
- The subject has received conventional treatment but the efficacy is poor, or cannot tolerate the side effects of conventional treatment;
- Visual analogue scale for pain within 24 hours before surgery e 5;
- ... and 1 more (see full listing online)

Exclusion (12)

- Subjects who need to receive both radio frequency modulation and intrathecal drug infusion treatment simultaneously;
- Subjects who are known to have cardiac implants (pacemakers or defibrillators) or other implantable neural stimulators (spinal cord stimulators or deep brain stimulators, etc.);
- Subjects with severe psychological and/or mental disorders and/or non therapeutic drug dependence;
- Subjects expected to undergo MRI examination within 30 days after PNS implantation;
- Expected to be discharged within 48 hours or less;
- ... and 7 more (see full listing online)
