

# Implementation of Transcranial Magnetic Stimulation for Smoking Cessation

NCT06346028

---

Status	RECRUITING
Phase	Phase 4
Sponsor	Centre for Addiction and Mental Health
Enrollment	40 participants

## Key Eligibility Criteria

---

### Inclusion (3)

- Smoking cigarettes daily (self-reported)
- Currently employed as a HCP (physician, social worker, occupational therapist, etc.) at the CAMH NDC
- Involved in the care of at least 1 patient who has received rTMS for smoking cessation

### Exclusion (7)

- Have any intracranial implant (e.g., aneurysm clips) or any other metal object within or near the head, excluding the mouth, that cannot be safely removed.
- Pregnant or intending to be pregnant during the study.
- A history of a primary seizure disorder, seizure associated with an intracranial lesion, recurrent seizures related to substance intoxication or withdrawal or recent seizure within the last 6 months.
- Taking any anticonvulsant medication unless it cannot be tapered or discontinued due to risk of clinical safety or destabilization, according to the participant or their referring physician.
- Taking benzodiazepines with dose equivalent or greater than lorazepam 2mg/day unless it cannot be tapered or discontinued due to risk of clinical safety or destabilization, according to the participant or their referring physician.
- ... and 2 more (see full listing online)
