

Prospective Evaluation of Effectiveness and Safety of Closed-Loop Spinal Cord Stimulation in Treating Patients With Chronic Pelvic Pain

NCT06377969

Status	RECRUITING
Phase	Not Applicable
Sponsor	Stanford University
Enrollment	10 participants

Key Eligibility Criteria

Inclusion (1)

- The investigators will include all adult patients (18 or older) with pelvic pain more than 6 months that has not responded to conservative medical management

Exclusion (5)

- Major untreated medical comorbidities (uncontrolled diabetes mellitus, severe obesity, uncontrolled cardiopulmonary disease, etc.)
- Secondary causes of pelvic pain that can be treated with appropriate medical or surgical interventions
- Major untreated psychological comorbidities
- Anatomical challenges to place spinal cord stimulator
- Ongoing legal or disability claims

Locations (1 total)

Stanford, Redwood City, California, United States
