

# Neural Autoantibody Prevalence in New-onset Focal Seizures of Unknown Etiology

NCT06388161

---

Status	RECRUITING
Sponsor	Shen Chun-Hong
Enrollment	300 participants

## Key Eligibility Criteria

---

### Inclusion (5)

- Patients have a diagnosis of new-onset focal epileptic seizure or epilepsy and present with their first seizure within the previous 12 months
- Patients are prospectively recruited from the routine practice of epileptologists in epilepsy centers and epilepsy clinics
- There is no obvious suspicion of autoimmune encephalitis
- Written informed consent and sera are obtained
- Cerebrospinal fluid test must be conducted, when patients have detectable serum autoantibodies

### Exclusion (3)

- Patients have other etiology of seizures, such as structure, infection, genetics and metabolism.
- Written informed consent are not obtained
- Loss of follow-up
