

Impact of Capillaroscopy on the Management of Undifferentiated Connective Tissue Disease

NCT06399822

Status	RECRUITING
Phase	Not Applicable
Sponsor	CHU de Quebec-Universite Laval
Enrollment	40 participants

Key Eligibility Criteria

Inclusion (4)

- Be aged 18 and over;
- Have been diagnosed with undifferentiated connective tissue disease by a rheumatologist;
- Meet the preliminary classification criteria for undifferentiated connective tissue disease: present signs and symptoms suggestive of connective tissue disease, but do not meet the criteria for a connective tissue disease and have a positive antinuclear antibody on at least 2 occasions;
- Have developed the first signs and symptoms of the disease less than 10 years before recruitment.

Exclusion (4)

- In the opinion of the clinician, have a health condition that does not allow a delay of six months before carrying out the capillaroscopy;
- Have been diagnosed and/or meet the classification criteria for another connective tissue disease (for example, systemic lupus, etc.);
- Have already performed a capillaroscopy in the past, regardless of the time or the reason;
- Be unable to consent or respond to questionnaires.
