

# A Rapid Triage Test to Improve Risk-stratification of Febrile Children (EChLiBRiST, Clinical Trial 1, Outpatients)

NCT06422338

---

Status	RECRUITING
Phase	Not Applicable
Sponsor	Barcelona Institute for Global Health
Enrollment	5,212 participants

## Key Eligibility Criteria

---

### Inclusion (5)

- Age ≥2 months and <60 months
- Written informed consent from the child's parent or caregiver
- History of fever for ≥7 days OR hypothermia (i.e., axillary temperature <35.5°C) OR suspected severe infection (e.g., in children with moderate or severe acute malnutrition).
- Lives within the catchment area of the study facility and must intend to continue to reside there for the duration of the study
- For the RTI sub-study only: presence of respiratory symptoms compatible with RTI.

### Exclusion (5)

- Weight less than 2.5kg
- Main reason for consultation is an injury, trauma or acute poisoning
- Enrolled in another clinical trial testing a new drug
- Enrolled in a vaccine trial in the last 3 months.
- Any other condition determined by the investigators that makes it unlikely that the participant would complete the study
