

Efficacy of Targeted Medical Therapy in Angina and Nonobstructive Coronary Arteries

NCT06424834

Status	RECRUITING
Phase	Phase 2, Phase 3
Sponsor	Stanford University
Enrollment	150 participants

Key Eligibility Criteria

Inclusion (9)

- All patients with stable angina referred to the Stanford University Hospital cardiac catheterization laboratory for clinically indicated coronary function testing are eligible for inclusion into the study.
- Absence of significant epicardial coronary artery disease on angiography
- Fractional flow reserve ≥ 0.80
- And e 1 of the following:
 - Epicardial coronary spasm on acetylcholine testing
- ... and 4 more (see full listing online)

Exclusion (5)

- Acute coronary syndrome less than one week prior to enrolment
- Cardiomyopathy
- Contraindications to beta-blockers or calcium channel blockers
- Baseline systolic blood pressure ≤ 95 mmHg
- Baseline heart rate ≤ 55 bpm

Locations (1 total)

Stanford Hospital, Palo Alto, California, United States
