

# Investigator-initiated Clinical Trial to Observe Conjunctival Goblet Cell Using an Anterior Segment Imaging Device

NCT06427629

---

<b>Status</b>	RECRUITING
<b>Phase</b>	Not Applicable
<b>Sponsor</b>	Seoul National University Hospital
<b>Enrollment</b>	148 participants

## Key Eligibility Criteria

---

### Inclusion (3)

- Adult patients aged 19 years or older.
- Patients who are currently using or scheduled to use 0.5% moxifloxacin eye drops for ophthalmic surgery (control group) or for ocular surface diseases (patient group: dry eye, Sjogren's syndrome, Stevens-Johnson syndrome, graft versus host disease).
- Patients who have agreed to understand and comply with the clinical trial protocol's plans for medical examinations and follow-up observations.

### Exclusion (3)

- Pregnant or planning to become pregnant, and lactating women.
- Patients with intellectual disabilities and other psychiatric disorders who, at the discretion of the investigator, are deemed ineligible for participation in the clinical trial.
- Patients with hypersensitivity reactions to 0.5% moxifloxacin eye drops, or patients for whom administration is contraindicated.
