

NeuroFLiPP: Parametric PET of Neuroinflammation in Fatty Liver Disease

NCT06453915

Status	RECRUITING
Phase	Early Phase 1
Sponsor	University of California, Davis
Enrollment	12 participants

Key Eligibility Criteria

Inclusion (7)

- Participants ≥ 18 years age
- Participants who have or have planned a liver biopsy as:
 - standard of care for fatty liver disease with risk factors for metabolic dysfunction-associated steatohepatitis (MASH), or
 - as part of another Clinical Trials study for MASH, or
 - standard of care prior to undergoing bariatric surgery
- ... and 2 more (see full listing online)

Exclusion (11)

- History of alcohol abuse, chronic hepatitis B or C, or other chronic liver disease other than non-alcoholic fatty liver disease.
- Uncontrolled claustrophobia
- Body weight > 225 kg due to limitations of the scanner bed
- Pregnant or breast-feeding (due to risks of ionizing radiation; urine pregnancy test will be administered prior to start of each PET/CT session for all participants between 18 to 60 years old who are able to get pregnant, unless documented hysterectomy is available)
- Concurrent or prior enrollment in a separate research study involving a PET scan performed within the last 12 months for research purposes only.
- ... and 6 more (see full listing online)

Locations (1 total)
