

Short Versus Standard of Care Antibiotic Duration for Children Hospitalized for CAP

NCT06494072

Status	RECRUITING
Phase	Phase 4
Sponsor	Medical College of Wisconsin
Enrollment	236 participants

Key Eligibility Criteria

Inclusion (5)

- Children aged 3 months to <18 years old
- Hospitalized in either the acute care or the pediatric intensive care units
- Clinically diagnosed with uncomplicated bacterial community acquired pneumonia (as determined by the treating physician)
- Radiological findings suggestive of pneumonia (such as consolidation, lobar or interstitial infiltrates)
- Achieved clinical stability within 72 hours from the first antibiotic dose (clinical stability includes being off supplemental oxygen/ventilatory support and temperature remaining < 38 Celsius).

Exclusion (16)

- Hemodynamic instability at any point during hospitalization that required inotropic support
 - Requirement of respiratory support > 72 hours
 - Presence of a parapneumonic effusion >10 mm on decubitus x-ray or greater than ¼ of hemithorax opacified on chest imaging
 - Need for chest tube placement
 - Extrapulmonary involvement (ie: another infection located outside of the lungs) except for otitis media if the planned treatment is < 5 days
- ... and 11 more (see full listing online)
