

# Cilostazol vs. Aspirin in Acute Non-cardioembolic Stroke With Cerebral microbleeds

NCT06530537

---

Status	RECRUITING
Phase	Phase 3
Sponsor	Zhejiang Provincial People's Hospital
Enrollment	848 participants

## Key Eligibility Criteria

---

### Inclusion (3)

- Acute ischemic stroke (within 1 month of onset)
- Non-cardioembolic stroke
- Presence of cerebral microbleeds (CMBs) confirmed by susceptibility-weighted imaging (SWI)

### Exclusion (5)

- Previous diagnosis of cerebral amyloid angiopathy (CAA) according to the Boston 2.0 diagnostic criteria
- History of intracerebral hemorrhage highly suspected to be caused by CAA-related lobar hemorrhage
- Severe adverse reactions (such as active bleeding, severe allergies, etc.) to aspirin or cilostazol in the past, leading to non-compliance with medication
- Requirement for combined anticoagulant therapy
- Requirement for long-term dual antiplatelet therapy (>1 month)
