

Lignocaine vs Bupivacaine Infiltration for Postpartum Perineal Pain After Vaginal Delivery With Episiotomy in Primigravidae

NCT06568289

Status	RECRUITING
Phase	Not Applicable
Sponsor	Ain Shams University
Enrollment	60 participants

Key Eligibility Criteria

Inclusion (3)

- Primigravidae with the full term undergoing vaginal delivery with episiotomy.
- Pregnancies and singleton vertex cephalic fetuses.
- In the active phase of the first stage of labor.

Exclusion (8)

- Patients with history of drug allergies to study drugs as this will increase the risk of complications.
- Patients undergoing vaginal delivery under epidural or spinal anesthesia as they will affect post-operative pain and interfere with assessment of efficacy of local infiltration of the study drugs.
- Evidence of local infection at site of injection as this will interfere with the action of the study drug and will increase the risk of complications.
- Inability to cooperate as this will affect our assessment.
- Patient's refusal.
