

Treatment of Chronic Anger and Aggression Following Military-Related Betrayal

NCT06609330

Status	RECRUITING
Phase	Not Applicable
Sponsor	The University of Texas Health Science Center at San Antonio
Enrollment	40 participants

Key Eligibility Criteria

Inclusion (4)

- Adult active duty military service members and veterans aged 18 or older.
- Endorses a history of military-related betrayal (on the Modified Moral Injury Questionnaire)
- Endorses problematic anger in the past month (as evidenced by a score of 12 or above on the Dimensions of Anger Reactions; DAR-5)
- Engaged in at least 1 self-reported act of aggression in the past 1 month (on the Overt Aggression Scale-Modified; OAS-M)

Exclusion (6)

- Participated in an anger management or trauma-focused intervention within the past 3 months as assessed by self-report.
- Acute suicidality requiring immediate intervention, such as hospitalization as assessed by the Depressive Symptoms Index-Suicidality Subscale (DSI-SS) combined with follow up clinical interview for elevated scores.
- Is currently homicidal with plans and intent to hurt a specific person and requiring immediate intervention as measured by self-report and follow-up with clinician if screened positive.
- Moderate to severe brain injury as measured by inability to comprehend the informed consent document or baseline assessments.
- Has severe alcohol consumption patterns as evidenced by a score of 19 or above on the Alcohol Use Disorders Identification Test (AUDIT).
