

A Phase 3, Placebo-Controlled Study to Investigate LP352 in Children and Adults With Dravet Syndrome (DS)

NCT06660394

Status	RECRUITING
Phase	Phase 3
Sponsor	Longboard Pharmaceuticals
Enrollment	160 participants

Key Eligibility Criteria

Inclusion (8)

- Diagnosis of DS must fulfill all of the following criteria:
- Participants with seizure onset age ≥ 1 and < 20 months
- The participant has a history of at least 1 of the following seizure type(s): prolonged generalized tonic-clonic, hemiclonic, myoclonic, tonic, atonic, atypical absence, focal impaired awareness, nonconvulsive status epilepticus
- The participant has a current occurrence of at least 1 of the following countable motor seizure types: generalized tonic-clonic, tonic (bilateral), clonic (bilateral), atonic (bilateral) with truncal/leg involvement, focal motor (including hemiclonic), and focal to bilateral tonic-clonic
- The participant has demonstrated an average of at least 4 countable motor seizures per month for the 3 months prior to Screening.

... and 3 more (see full listing online)

Exclusion (8)

- The participant has a history of infantile/epileptic spasms.
- The participant has been admitted to a medical facility for treatment of status epilepticus requiring mechanical ventilation within 3 months prior to Screening.
- The participant has a neurodegenerative disorder as indicated by magnetic resonance imaging or genetic testing.
- The participant has an acquired lesion/injury unrelated to the primary etiology that could contribute as a secondary cause of seizures.
- The participant is receiving exclusionary medications.

... and 3 more (see full listing online)

Locations (93 total)

Arkansas Children's Hospital - PIN, Little Rock, Arkansas, United States
David Geffen School of Medicine at UCLA, Los Angeles, California, United States
The Stanford Division of Child Neurology, Palo Alto, California, United States
... and 90 more locations
