

# A National Screening Program for Islet Autoantibodies Among First-degree Relatives of T1D Patients

NCT06665815

---

**Status** RECRUITING  
**Sponsor** Rabin Medical Center  
**Enrollment** 20,000 participants

## Plain Language Summary

---

This study is offering blood tests to the first-degree relatives (parents, siblings, or children) of people with type 1 diabetes to check for autoantibodies — proteins the immune system makes that attack insulin-producing cells in the pancreas. Finding these early warning signs can identify people who may develop type 1 diabetes years before symptoms appear, allowing for earlier intervention.

**\*\*You may be eligible if...\*\***

- You are between 2 and 45 years old
- You have a parent, brother, sister, or child with type 1 diabetes
- You are willing to sign an informed consent form (or have a parent sign for you)

**\*\*You may NOT be eligible if...\*\***

- You already have any type of diabetes (type 1, type 2, or a rare inherited form)
- You have previously taken insulin or oral diabetes medications
- You are currently on systemic immune-suppressing medications (inhaled or topical steroids are acceptable)

Talk to your doctor to see if this trial is right for you.

## Key Eligibility Criteria

---

### Inclusion (3)

- Age 2-45 years
- First-degree relatives of Type 1 Diabetes probands
- Signing an informed consent

### Exclusion (3)

- Known diabetes of any kind (type 1, type 2, MODY)
- Have a previous history of being treated with insulin or oral diabetes medications.
- Currently, using systemic immunosuppressive agents (topical and inhaled agents are acceptable)

## Locations (1 total)
