

The Effect and Safety of Combined Anti-platelet Treatment in Acute Ischemic Stroke Due to Large Artery Atherosclerosis

NCT06757764

Status	RECRUITING
Phase	Phase 4
Sponsor	Asan Medical Center
Enrollment	2,340 participants

Key Eligibility Criteria

Inclusion (4)

- Age of 20 years or older
- Acute ischemic stroke due to large artery atherosclerosis (both including Intra and extracranial atherosclerosis) which may be defined by a ischemic lesion confirmed at diffusion-weighted image and a corresponding significant stenosis (more than 50% of diameter reduction) proximal to the ischemic lesion confirmed by MR angiography or CT angiography.
- Informed consent obtained within 72h from stroke onset
- Acquisition of written informed consent prior to study entry

Exclusion (11)

- Large infarction unable to start antiplatelet treatment
- Combined with acute intracranial haemorrhage
- With initial haemorrhagic transformation
- Previous mRS higher than 2
- Indicated for anticoagulation
- ... and 6 more (see full listing online)
