

Analysis of Patients With Autosomal Dominant Polycystic Kidney

NCT06759142

Status	RECRUITING
Sponsor	IRCCS Azienda Ospedaliero-Universitaria di Bologna
Enrollment	180 participants

Key Eligibility Criteria

Inclusion (2)

- Age-matched subjects with a diagnosis of ADPKD defined on the basis of the Unified Criteria of Pei. Diagnosis in subjects with a positive family history is based on age-differentiated ultrasound criteria. The presence of a "total of 3 or more cysts" in subjects aged 18-39 years and "2 or more cysts in each kidney" in at-risk subjects aged 40-59 years are sufficient to make the diagnosis of ADPKD. In the absence of family history, the presence of more than 10 cysts per kidney on ultrasound is typically considered diagnostic. Where the picture appears unclear, and particularly where the diagnosis has a major fallout (related to family planning, renal donation, initiation of specific drug treatment), genetic confirmation is strongly recommended.
- Obtaining Informed Written Consent.

Exclusion (1)

- None.
