

Prophylactic Mesh Reinforcement After Open Aortic Aneurysm Repair

NCT06762561

Status RECRUITING
Sponsor Hôpital Fribourgeois
Enrollment 20 participants

Key Eligibility Criteria

Inclusion (4)

- Adult patients (≥18 years old) who underwent open abdominal aortic aneurysm (AAA) repair with prophylactic retromuscular mesh reinforcement between January 2019 and January 2024
- Availability of complete medical records, including preoperative history, surgical details, and postoperative follow-up data
- Attendance at a clinical follow-up examination at least one year after the procedure
- General informed consent signed for the use of medical data for research purposes

Exclusion (3)

- Patients with incomplete or missing medical records, including preoperative, intraoperative, or follow-up data
- Patients who required a re-laparotomy involving incision or suture of the prophylactic mesh and subsequently developed an incisional hernia.
- Patients who did not attend the required clinical follow-up examination at least one year postoperatively.
