

Does Style of Pre-sedation Instructions Improve Patient Outcomes in Ambulatory Anesthesia for Oral and Maxillofacial Surgery?

NCT06768021

Status	RECRUITING
Phase	Not Applicable
Sponsor	Alameda Health System
Enrollment	300 participants

Key Eligibility Criteria

Inclusion (3)

- Subjects within ages 8 to 70.
- Subjects planned for ambulatory intravenous sedation in the oral and maxillofacial surgery clinic.
- Ability to understand verbal English or understand instructions using a sign-language or voice interpreter of their native language.

Exclusion (3)

- Subjects who cannot understand the instructions, even with an interpreter (extremes of age, cognitive impairments, severe psychiatric disease that may affect participation)
- Subjects not undergoing intravenous sedation (oral sedation, nitrous oxide, local anesthesia)
- Subjects undergoing anesthesia in other environments (gastrointestinal suite, operating rooms, interventional radiology)
