

The Effects of Whirlpool and Contrast Bath in Patients with Complex Regional Pain Syndrome After Distal Radius Fracture

NCT06769373

Status	RECRUITING
Phase	Not Applicable
Sponsor	Afyonkarahisar Health Sciences University
Enrollment	40 participants

Key Eligibility Criteria

Inclusion (1)

- Patients with complex regional pain syndrome type-1 (CRPS-type 1) after distal radius fracture, who were followed conservatively (long/short arm splint-cast) between the ages of 18-70, who applied to AFSU Physical Medicine and Rehabilitation Clinic. It is planned to use the Budapest diagnostic criteria for the diagnosis of CRPS Type 1.

Exclusion (10)

- Orthopedic injuries (other accompanying orthopedic fractures, such as ulna fracture, carpal bone fractures),
- Other system injuries,
- Patients whose distal radius fractures were surgically treated,
- Patients who had previously undergone surgery on the same upper extremity,
- Nerve, tendon and artery injuries accompanying the fracture,
- ... and 5 more (see full listing online)
