

The Impact of Ultrasound-Guided Superficial and Deep Paravertebral Nerve Blocks at the Superior Costotransverse Ligament on Hemodynamics During the Induction Phase of Thoracoscopic Lung Lobectomy: A Multicenter, Double-Blind, Randomized Controlled Trial

NCT06841822

Status	RECRUITING
Phase	Not Applicable
Sponsor	Nanjing First Hospital, Nanjing Medical University
Enrollment	168 participants

Key Eligibility Criteria

Inclusion (4)

- Patients scheduled for elective two-port video-assisted thoracoscopic lobectomy
- Age: ≥18 years
- ASA classification: I-III
- BMI: 18-30 kg/m²

Exclusion (14)

- Severe hypertension (SBP ≥180 mmHg or DBP ≥110 mmHg)
- MAP <70 mmHg before anesthesia induction
- Emergency surgery
- Severe cardiovascular disease, including history of cerebral or thoracic/abdominal aortic aneurysm
- Congestive heart failure (New York Heart Association class III or IV)
- ... and 9 more (see full listing online)

Locations (1 total)
